

Develop The Web Application Using Node-RED

PNT2022TMID30207

1. To Develop the web application using Node-RED

Steps :

1. Open a Node-RED project

2. Add code to get child location in python

```
import json
import wiotp.sdk.device
import time

myConfig = {
    "identity": {
        "orgId": "yw4h61",
        "typeId": "IOT_CHILD",
        "deviceId": "16022002"
    },
    "auth": {
        "token": "1911066abcdeffgh"
    }
}
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()

while True:
    name= "Child"
    #in area location

    #latitude=17.4225176
    #longitude=78.5458842

    #out area location

    latitude=17.4219272
    longitude=78.5488783
    myData={'name': name, 'lat': latitude, 'lon': longitude}
    client.publishEvent(eventId="status", msgformat="json", data=mydata, qos=0, onpublish=None)
    print("Data published to IBM IOT platform : " + myData)
    time.sleep(5)

client.disconnect()
```

3. Create the GeoFence

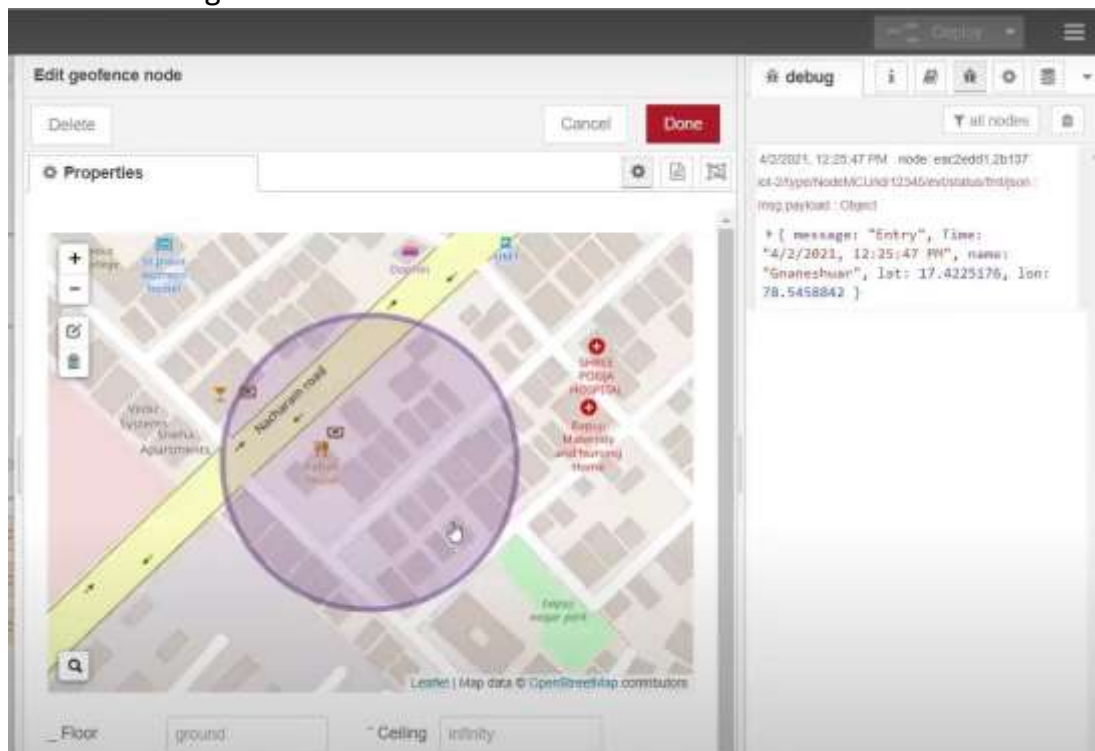

4. Edit the HTTP Request URL

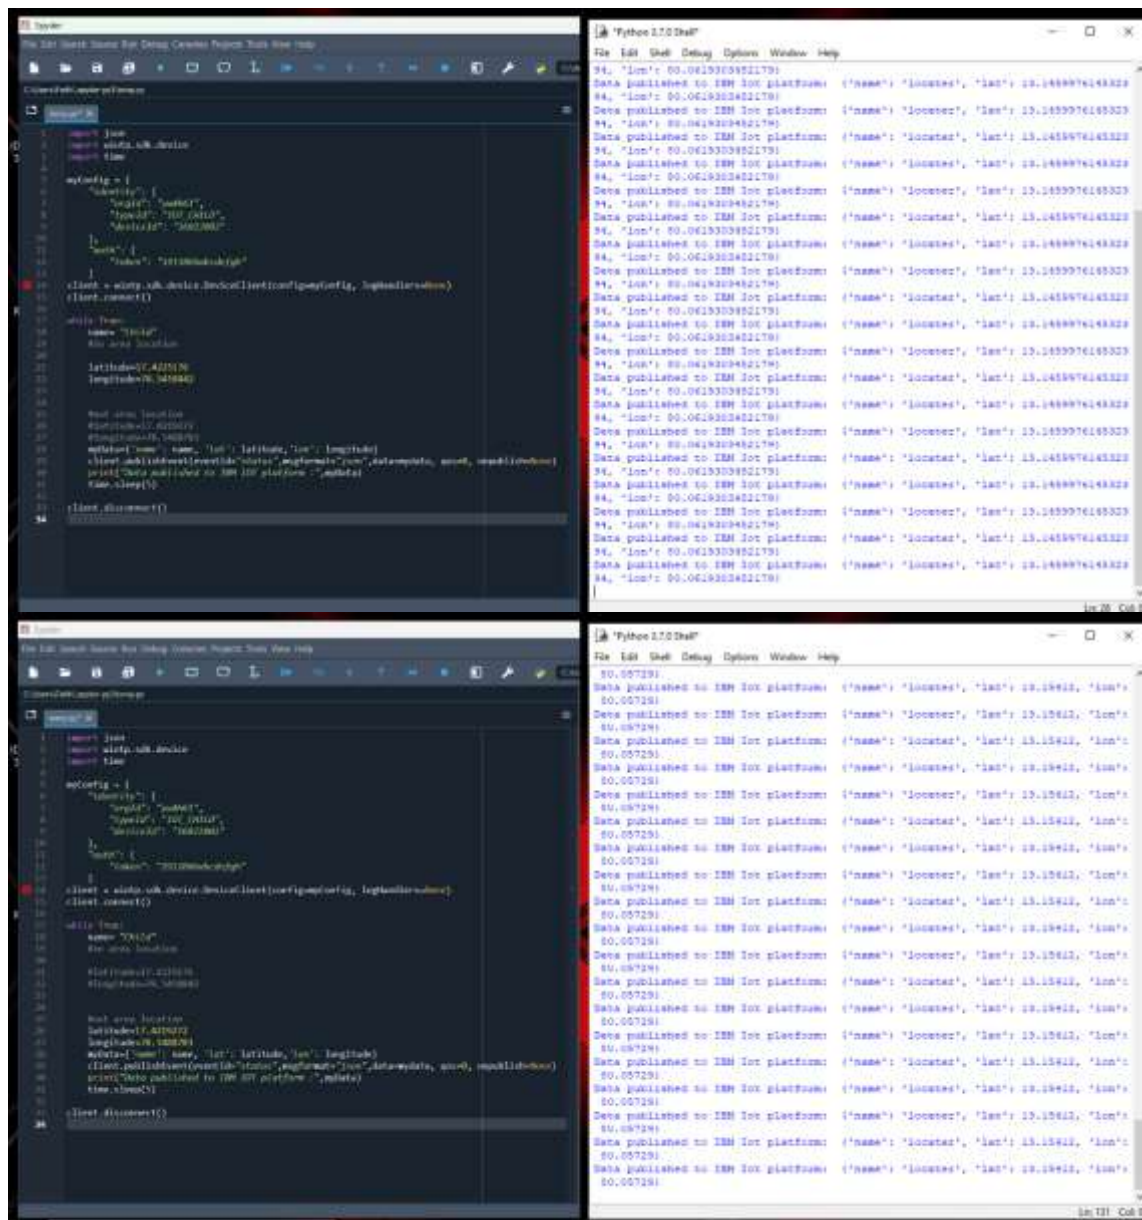

5. Locate the child

6. Create the geofence node

7. Python script send requests to IBM Cloud

8. After running the script, the web UI shows “Person is not in the particular area”

Conclusion:

Developed the web application using Node-RED Successfully
